## PROFESSIONAL SUMMARY

Freelance Fullstack Web Developer and System Architect with a track record of delivering production-grade applications that combine robust engineering with cinematic, pixel-perfect design. I specialise in turning complex technical requirements into high-performance digital platforms — from multi-tenant corporate hubs to real-time booking engines and contactless dining solutions. My work is guided by one principle: **precision architecture over generic templates**.

## CORE EXPERTISE

| End-to-End System Design                                                                           | Pixel-Perfect Frontend                                                                            | Scalable Backend                                                                                    |
|----------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------|
| Robust architectures from database schema to API gateways, built for scale and seamless data flow. | Cinematic user interfaces tailored to individual brand identities — no generic templates allowed. | High-performance server environments engineered for robust async processing and strict uptime SLAs. |

## SELECTED PROJECTS (2023 – 2025)

### 01 Enterprise Hub

Website for 8+ Companies · 2025

A multi-tenant corporate architecture supporting over 8 distinct company profiles under a unified design system. Built with performance and scalability in mind — handling varied content models while maintaining strict type-safety and lightning-fast edge delivery.

[ React ] [ Next.js ] [ Tailwind CSS ] [ Sanity CMS ]

### 02 Serenify SRM

Spa Reservation Management System · 2024

An end-to-end bespoke SPA booking engine replacing legacy software with a beautiful, calendar-first reactive UI. Features include real-time availability sync, dynamic pricing rules, staff scheduling, and seamless Stripe payment integration.

[ TypeScript ] [ Node.js ] [ PostgreSQL ] [ Redis ]

### 03 Scan & Dine

Digital QR Menu System · 2024

A high-conversion contactless dining experience. Allows restaurants to instantly deploy beautiful digital menus linked to QR patches. Built with offline availability (PWA) and sophisticated order-routing to kitchen display systems.

[ Vue / Nuxt ] [ Supabase ] [ PWA ] [ WebSockets ]

### 04 Mini Apps Protocol

Telegram Mini Apps Framework · 2023

A robust framework for building and deploying Telegram Mini Apps — bypassing App Store constraints entirely. Brings rich e-commerce, gaming, and utility interfaces directly into the messenger client for millions of native users.

[ React ] [ Telegram WebApp API ] [ tRPC ]

## MY DEVELOPMENT PROCESS

| 01 / Discovery & System Design                                                                                | 02 / Pixel-Perfect Build                                                                           | 03 / Deployment & Scale                                                                             |
|---------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------|
| Mapping technical requirements into a robust end-to-end architecture before a single line of code is written. | Translating architecture into a performant, dynamic frontend application with cinematic precision. | Engineering high-availability servers and CI/CD pipelines to ensure flawless user access worldwide. |

TECHNOLOGY STACK

|           |                                                                           |
|-----------|---------------------------------------------------------------------------|
| Frontend  | React, Next.js, Vue / Nuxt, TypeScript, Tailwind CSS, GSAP, Framer Motion |
| Backend   | Node.js, tRPC, REST APIs, PostgreSQL, Redis, Supabase, Sanity CMS         |
| DevOps    | Vercel, CI/CD Pipelines, Docker, Cloud Hosting, Edge Delivery             |
| Platforms | Telegram Mini Apps (WebApp API), PWA, WebSockets, Stripe Integration      |
